

Metal Detector Information Sheet

Prometric employs security methods to ensure prohibited items such as cell phones, notes, cameras, do not enter the testing room. Each examinee is provided with Prometric's Test Center Regulations Form, notifying them that they are not permitted to bring in prohibited items.

Examinees are instructed to pull out their front and rear pockets for inspection prior to each entry into the test room. Prometric uses a metal detector wand to further prevent any occurrences of prohibited electronic items being used in their test room.

What this means to examinees:

- Examinees will be scanned using a metal detector wand each time they enter the testing room.
- The scanning will be conducted in full view of the surveillance camera located in the Admin area.
- The wand will be passed over the person, both front and back, at a distance of approximately 2 inches.
- Examinees will be asked to stand with their arms slightly held out.
- If any prohibited items are found, examinees will be instructed to place them in a locker. Once they have done so, they will be allowed to test.
- Extensive research by the manufacturer has produced no information that would indicate that the use of this product has adverse effects on pregnancies or on the operation of electronic implants such as pacemakers.
- Examinees expressing concerns about being scanned due to an electronic medical implant such as a pacemaker, insulin pump, etc. may decline to be scanned, and still be allowed to test.
- Pregnant examinees declining due to medical concerns will also be permitted to test.
